Summary

Front End Developer and BCA (Information Technology) student with hands-on experience building full-stack web applications using React.js and modern JavaScript tooling. Certified in Full Stack Web Development, with a track record of independently designing, building, and debugging production-style applications, combined with prior team leadership experience in a fast-paced service business. Comfortable working across the stack and quick to learn new tools and APIs.

Technical Skills

- **Languages:** JavaScript (ES6+), HTML5, CSS3
- **Frontend:** React.js, Redux Toolkit (RTK), React Router, React Hook Form, Tailwind CSS, Bootstrap 5, TinyMCE
- **Backend & Tools:** Node.js, MongoDB, Appwrite (BaaS), REST APIs, Git/GitHub
- **CS Fundamentals:** Data Structures, Algorithms, Big-O Analysis
- **Other:** Team Leadership, Client Relations, Problem Solving

Projects

Full-Stack Blogging Platform

Personal Project

React.js, Redux Toolkit, Appwrite, React Hook Form, TinyMCE, React Router, Tailwind CSS

- Architected and built an end-to-end blogging platform with user authentication, post creation/editing, and role-based access control using Appwrite as the backend-as-a-service.
- Implemented a rich-text authoring experience with TinyMCE and integrated form validation using React Hook Form, resolving subtle validation-driven submission failures to ensure a reliable login and posting flow.
- Designed global state management with Redux Toolkit for user sessions and post data, and built a responsive, sticky-header layout using Tailwind CSS.
- Diagnosed and resolved cross-cutting bugs across the stack, including backend file-preview limitations, field-mapping mismatches between forms and the database schema, and author-permission checks controlling edit/delete access.
- Managed version control and deployment workflow via Git and GitHub.

Currency Converter

Personal Project

React.js, Tailwind CSS, REST API

- Built a real-time currency converter in React that fetches live exchange rates from a public REST API and updates conversion results dynamically as users change input values or currency selections.
- Managed component state and asynchronous API calls with React hooks, including loading and error handling for failed or delayed responses.
- Styled a clean, responsive UI with Tailwind CSS for quick, intuitive currency selection and conversion.

Certifications

- Full Stack Web Development — Dice Academy, Delhi

Education

Indira Gandhi National Open University (IGNOU)
Bachelor of Computer Applications (BCA), Information Technology

2024 – 2027
